

V-Grip™ Shelving closed unit

- Adjustable without the need of tools, on 1 1/2" centers
- Multiple widths and depths available
- Post heights up to 15'
- Exclusive upright post design

V-Grip™ Shelving open unit

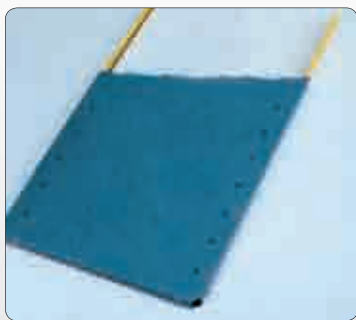

V-Grip™ Shelving features the most efficient fastening principle known

Double-flanged V-Grip uprights allow easy side-by-side assembly of shelving in rows, with the strongest configuration.

Each flange of the upright supports a shelf from one adjoining unit only

Heavy-duty V-Grip shelves are constructed of 18-gauge steel, and double-flanged on all four sides for maximum strength and firmness.

End and front reinforcing channels can be added to shelves to accommodate extra stress

Common upright clamp provides back-to-back reinforcement.

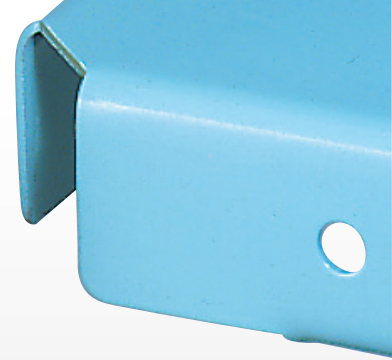

*Clip is shown in color for clarity, actual part is galvanized steel.

Optional drawers maximize cubic density in V-Grip Shelving

Shelves adjust instantly on 1 1/2" centers, without disturbing shelves in adjoining units

Corner reinforcement inserts into upright; shelf simply fits down over it, and locks into place. *

Tapered slots in uprights accept corner reinforcements for 4-way shelf support.

Double-flanged uprights keep two shelves from adjoining units from adding stress to any single flange.

*shown in color for clarity, actual part is zinc plated.
