V-Grip™ Wire Shelving

V-Grip™ wire shelving is part of an industrial system designed to give the user structural integrity and flexibility to easily change the location of the shelving. V-Grip™ upright posts have an exclusive triangular design that maximizes load bearing capability while providing a smooth front surface without unsightly holes or hardware.

Shelving locations can be adjusted in 1½ inch increments without having to remove other shelves above or below it. With a 700 lb capacity per shelf the unit can be used for a wide variety of items — from supplies and hardware to larger motors or dies or boxes of a variety of material.

Wire shelves provide better flow of light and air, and water from a ceiling mounted sprinkler system. In addition, other V-Grip™ accessories can be intermixed — 5 wire shelves and 2 solid metal shelves work easily together. The Starter and Add-On units reduce the cost when you want a row of shelving units as well. Join a 3 foot wide shelving unit to a 4 foot shelving unit for different sized items — or a 5 ft tall unit next to a 7 foot unit. Equipto believes it is the Best Value Industrial Wire Shelving in America.

If you have any questions, please contact your local District Sales Manager or call our customer service team at (800) 323-0801.
