## ARMY RESERVE SHOPS GET ORGANIZED WITH EQUIPTO TWO LEVEL SHELVING SYSTEM

As parts and special tool inventory requirements continue to grow at Army vehicle and equipment maintenance facilities, space and organizational challenges continue to mount for unit level personnel and logistics command staff alike. At the unit level, efficient access to parts and tools often becomes a daunting task with existing storage systems. This leads to over crowded parts rooms and satellite storage of inventory (connex boxes, detached warehousing, etc.) . At the command level, tracking of unit level inventory requirements becomes a challenge and unit level organization and safety inspections suffer.

The recent solution for an Army vehicle maintenance facility was an adaptable, turn-key, two level mezzanine system which accommodates high density parts storage into

there existing parts room. This new system significantly enhanced unit organization, inventory tracking, and parts consolidation.

Equipto offers a comprehensive range of storage solutions including shelving, bulk rack, modular cabinets, pallet rack, modular offices, weapon cabinets, work benches, mobile aisles, stairways, and mezzanines. Please feel free to contact us if you have any further questions regarding this project or would like a free site evaluation of your shop.
