

## Low-rise landings for conveyor manufacturers

As the latest addition to a crossover, mezzanine, platform and stairways line, new low-rise landings have been developed to ensure employees are properly positioned at a correct height next to conveyors or other work surfaces. The low-rise landings are ideal for conveyor manufacturers and users who are building distribution and fulfillment centers. Available in an array of lengths, the low-rise landings offer manufacturers a variety of options to choose from. For example, you can purchase a 3 x 18-foot x 16-inch top of deck landing, featuring a 54-square-foot Tuff Deck area. The unit also includes railings and two IBC-compliant stairways at each end, resulting in an overall length of 22 feet. **Equipto, equipto.com.**
